UFP13-01

Operating and Maintenance Manual
- This manual is meant to provide Customers with information on the machine and its specifications and the necessary operating and maintenance instructions in order to ensure machine performance and longevity.
- This manual is to be used by qualified and skilled operators with thorough knowledge of machine use and maintenance.

CONTENTS

CHAP. 1 - INFORMATION ON THE MACHINE  page 3

  8.1 - PUTTING THE MACHINE OUT OF SERVICE
  8.2 - SCRAPPING
CHAP.1 - INFORMATION ON THE MACHINE

1.1 - GENERAL PRECAUTIONS
- The vegetable cutter must be operated only by highly qualified personnel who are fully aware of the safety measures described in this manual.
- In case of a personnel turnover, training is to be provided in advance.
- Although the machine incorporates safety devices and protections for dangerous parts, it is recommended not to touch the moving parts.
- Before starting cleaning and maintenance operations, disconnect the plug from the supply socket.
- To carry out cleaning and maintenance, assess the residual risks carefully (as protections are removed).
- Cleaning and maintenance require concentration.
- A regular check of the power supply cable is absolutely necessary; a worn-out or damage cord is very dangerous.
- If the machine malfunctions, it is recommended not to use it and do not try to repair it; please call the “Service Centre”, contact details are provided at the end of this manual.
- Do not use the machine for processing frozen products, meat and fishes with bones or non food products.
- Do not repair the machine yourself but call the “Authorised Service Centre”.
- Always use the pusher with the pestle to cut the food
- Do not fill too much the inlet cylinder and do not press too hard to avoid any problem.
- The manufacturer shall not be liable for damage to things or injury to persons in the event:
  ⇒ The machine or the safety devices and protections have been tampered with by non authorised personnel;
  ⇒ Non original spare parts and discs are installed;
  ⇒ The instructions provided in this manual are not followed scrupulously;
  ⇒ The machine surface is not cleaned with the right product.

1.2 - MACHINE DESCRIPTION

Fig. n°1 - General view of the vegetable cutter
1.2.1 - GENERAL DESCRIPTION
The vegetable cutter has been designed and manufactured by our firm with the aim of ensuring:
- the highest degree of safety during use, cleaning and maintenance;
- the highest standard of hygiene due to a careful selection of materials which come into contact with food products,
  elimination of sharp edges in the machine structure that come into contact with the food product, facilitating and en-
  suring perfect cleaning, as well as facilitating machine disassembly and part removal;
- robust and stable components;
a) reduced noise emission generated by the drive belt;
b) practical and easy to move.

1.2.2 - MANUFACTURING FEATURES (Materials used)
The vegetable cutter has been manufactured using materials with high resistance to mechanical worn and to corrosive
agents present in the product.
More specifically:
- The hopper and the base are made of anodised aluminium to ensure the contact with food products (hygiene) and to
  ensure resistance to acids, salts and rust.
- The body, the lid, the pusher handle and the discs support are made of steel AISI 304 or 430.
- The pestle, the pusher, the bowl and the control panel are made of high resistant plastic, appropriate to enter into
  contact with food products.
- The cutting discs:
a) The Disc set DF, DQ and PS have the main structure made of aluminium and the knives made of AISI 420.
b) The Disc set DT have the main structure made of plastic and the knives made of AISI 420.

1.3 - SAFETY DEVICES
1.3.1 - GENERAL SAFETY DEVICES
The mechanical, electrical and hygienic safety devices installed on the vegetable cutter described in this manual com-
plies with:
** UL 763 and NSF Standards

** The vegetable cutter is fitted with electrical and mechanical safety devices for machine operation as well as cleaning
and maintenance operations.
However, there are RESIDUAL RISKS which cannot be eliminated completely. These risks are listed in this manual un-
der WARNINGS.
These risks are cutting dangers due to the machine handling during the disc substitution and/or cleaning.

1.3.2 - ELECTRICAL SAFETY DEVICES
The vegetable cutter is fitted with microswithec:
A On the pusher lever, to stop the machine if the handle is lifted over the mouth of the lid and to enable to turn on the
  machine automatically when there is a dangerous situation (Fig. n°2).
B On the hopper, to stop the machine if the lid is removed (i.e. to replace the discs) (Fig. n°3A), and to permit to start the ma-
  chine voluntarily (by pressing pushbutton “I”) only when the lid is closed, correctly locked by the knob (Fig. n°3).
1.4 - ACCESSORIES + TOOLS

1.4.1 - ACCESSORIES
The vegetable cutter is provided with many accessories. Some are supplied with the cutter, other must be requested by the Client.

1.4.1.1 - STANDARD ACCESSORIES
**Pestle:** made of polyethylene for alimentary use, to facilitate the cutting of small product, it must be introduced in the product cylinder placed on the pusher (Fig. n°4).

**Collecting bowl:** made of polyethylene for alimentary use, “GASTRONORM” of 1/3, h=200; equipped with microswitch (Fig. n°5).

**Discharging spatula:** made of steel AISI 304 installed on the disc support pin. It makes easier to discharge the product when cut. It can only be used with the following discs DTV, DT2 - 3 - 4 - 7 - 9, DF1 - 2 - 3 - 4 (Fig. n°6)

**Discs holder:** made of plasticised steel for alimentary use, it is a useful collector for discs. (Fig. n°7).
1.4.2 - TOOLS
On demand, the vegetable cutter, can be supplied with different discs, suitable for many different cuts.

DISCS FOR SLICES “DF”:
*They are made of aluminium and the knives are made of AISI 420.*
The following discs are available:
- DF1
- DF2
- DF3
- DF4
- DF5 specific for tomatoes and peppers
- DF8
- DF10
- DF14

- DISCS FOR STRIPS “DT”:
*The supporting structure is made of plastic, and the body of the disc is made of AISI 420.*
The following discs are available:
- DTV to grate
- DT2
- DT3
- DT4
- DT7
- DT9 specific for mozzarella

- DISCS FOR MATCHSTICKS “DQ”:
*The supporting structure is made of aluminium and the knives are made of AISI 420.*
The following discs are available:
- DQ4
- DQ6
- DQ8
- DQ10

- DISCS FOR CUBES “PS”:
*The supporting structure is made of aluminium and the knives are made of AISI 420.*
The following discs are available:
- PS8 coupled with DF8
- PS10 DF10
- PS20 DF14

Machine electrical specifications are indicated on the rating plate affixed to the side of the grater; before connecting to power supply, please read § 4.2 Wiring.
3.1 - DESPATCH OF THE MACHINE  
(see Fig. n°13)
The vegetable cutter is accurately packed and then despatched from our warehouses. The package includes:

a) a solid cardboard box;
b) the machine;
c) some elements to keep the machine stable;
d) the bowl;
e) the pestle;
f) this manual;
h) EC conformity declaration.

Fig. n°13 - Package description
3.2 - PACKAGE CHECK UPON RECEIPT
Upon receipt of the package containing the Vegetable cutter, check accurately that the package has not been damaged during transport.
If the package shows signs of damage caused during transport, the carrier must be informed immediately; moreover a detailed report on the extent of the damage caused to the machine must be notified to the carrier within three days from the delivery date on the shipping documents. **DO NOT OVERTURN THE PACKAGE!!** When the package is transported, make sure the box is lifted by the 4 corners (parallel to the ground).

3.3 - PACKAGING DISPOSAL
The components of the packaging (cardboard, pallet, plastic straps and polyurethane foam) are urban solid waste; therefore they can be easily disposed of.
If the machine has to be installed in countries where specific regulations are in force, packaging must be disposed of in compliance with such regulations.

CHAP.4 - INSTALLATION

4.1 - SETTING UP OF THE MACHINE
The vegetable cutter must be installed on a suitable and adequate size work table refer to Fig. n°12, (and therefore sufficiently large); the machine must be solid, stable and fixed at a height of 80 cm from the ground. Moreover the machine must be installed in a room with max. 75% non saline humidity at a temperature between +5°C e +35°C; in a location and environment that does not provoke malfunctions or faults in the machine.

4.1.1 - COLLECTING BOWL
If the Vegetable cutter is provided with a collecting bowl, place it under the mouth of the machine, so as to cover the product exit (Fig. n°14).

4.2 - ELECTRICAL CONNECTION
4.2.1 - VEGETABLE CUTTER T.M. (115 Volt, 60 Hz)
The Vegetable cutter is equipped with a power supply cable with a SJT 16 AWG mm² section; length 1,5 m and a NEMA 5 plug.
Connect the Vegetable cutter to 115 Volt 60 Hz, by interposing a differential thermomagnetic switch 10 A \( I = 0,03 \) A. Check correct machine earthing.
Moreover check that the specifications on the rating plate-serial number (Fig. n°15) correspond to the specifications provided in the consignment and delivery note.
4.3 - WIRING DIAGRAMS OF THE VEGETABLE CUTTER

![Wiring Diagram](image)

Fig. n°16 - Wiring diagram

4.4 - FUNCTIONAL CHECK

To check the correct machine operation, proceed as follows:

a) Turn ON pushbutton “I” and stop pushbutton “0” and check that the corresponding pilot lights turn on and off (Fig. n° 17).

b) Check that the motor stops and then turns on when you lift or lower the pusher handle.

c) Check that the machine stops when your remove the lid and that it turns on by pressing pushbutton START “I” only if the lid is correctly installed.

![Control Panel](image)

Fig. n°17 - Control panel.

CHAP.5 - USE OF THE MACHINE

5.1 - DISCS ASSEMBLY

A Choose one of the following discs DF 1-2-3-4-5-8-10-14, DTV, DT 2-3-4-7-9, or DQ 4-6-8-10; remove the steel or aluminium lid, and place the disc on the shaft. Rotate the disc until it is fixed. Replace the stainless steel lid fastening it with the specific hinges or the aluminium lid fastening it with the knob.

B (TO CUT CUBES)

Choose the couple of discs among PS8-DF8, PS10-DF10, PS20-DF14. Place the first disc PS. with the cavity turned on the right side placing yourself in front of the machine. Then install the DF disc, proceeding as described in point “A” (see Fig. n°24).

**NB: NEVER USE THE DISCHARGING SPATULA WITH COUPLED DISCS PS-DF.**

C If the machine is supplied with a discharging spatula (Fig. n°6), we advise to use it with the following discs DF 1-2-3-5, DTV, DT 2-3-7-9, DQ4. The spatula must be assembled on the disc support pin before any other disc (see Fig. n°18). After having assembled the spatula, proceed as in point “A”.
5.2 - LOADING AND CUTTING THE PRODUCT

When the machine is working, it is necessary to stand correctly to avoid accidents. The body must always be perpendicular to the working table (see Fig. n°20). Pay the maximum attention that no members of your body enter in contact with the machine.

N.B. The product has to be loaded in the Vegetable cutter TM when it is OFF.

CAUTION!

Proceed as follows:

A Load the product in the mouth of the lid (see Fig. n°21). If the product is small (i.e. carrots, baby marrows, etc.) put it in the inlet cylinder placed on the handle (see Fig. n°22). Turn on the machine and help the cutting by pressing slightly on the pusher handle or with the pestle if you use the inlet cylinder.

B When the product is cut, lift the pusher handle, a safety device will stop the machine. Load another product and lower the handle, the machine will start automatically.

C To replace the disc and change the type of cutting, proceed as described in point 5.1 “A”. After this operation, an electronic device will lock the automatic restart of the machine; to restart the machine, it will be necessary to press pushbutton “I”.

D If you use the bowl, after 2-3 cutting cycles, empty it. The use of the machine with a full bowl, could block the discharge of the product in the working area, and cause a faulty cut, the machine lock or the motor failure.
**CHAP.6 - MAINTENANCE AND ADVICE**

**6.1 - FOREWORD**
Before performing any maintenance operation, it is necessary to:
Disconnect the plug from the mains to isolate it from the mains power supply.

**6.1.1 - BELT**
The drive belt does not require adjustment. In general after 3-4 years, it must be replaced, in this case call the “SERVICE CENTRE”.

**6.1.2 - FEET**
Feet may deteriorate or lose elasticity, reducing machine stability. If support feet show signs of wear or damage, replace.

**6.1.3 - POWER SUPPLY CABLE**
Periodically check for wear in the power supply cable. If the power supply cable shows signs of wear or damage call the “SERVICE CENTRE” for a replacement.

**6.1.4 - DISCS**
With time the blade could worn.
For DTV, DT 2, 3, 4, 7, 9 and PS 6, 8, 10, 20 discs; it is necessary to buy new discs.
For DF 1, 2, 3, 4, 5, 8, 10, 14 and DQ 4, 6, 8, 10 discs, it is possible to replace the blade.
In this case, call the “SERVICE CENTRE” indicating the name of the disc.

**6.2 - WHAT TO DO IF...**

**6.2.1 - The fixing of the discs is faulty:**
Check that the discs and the disc support pin are clean.

**6.2.2 - The lid does not lock:**
Check that the lid is installed correctly and that it is clean.

**6.2.3 - The product is not cut correctly:**
Check that the blade is not worn.

**6.2.4 - The product does not go out correctly or is badly cut:**
Check that the discharging spatula has not been assembled with the DT discs (the whole set); DF 1, 2, 3, 4; DQ 4; that the bowl is not full and that the exit opening is not obstructed.

**6.2.5 - The machine locks:**
Check that the product is not frozen or too hard and that the power supply is the one indicated on the rating plate (Fig. n°15).

**6.2.6 - The micro on the pusher handle and on the lid do not work:**
Check that they are not dirty.

**6.2.7 - The machine does not start:**
Check that all the safety devices are correctly installed (See Chapter about safety devices 1.3); that the plug and the switches are correctly connected.

**CHAP.7 - CLEANING OF THE MACHINE**

**7.1 - FOREWORD**
- The machine must be cleaned at least once a day. If necessary clean when required during the day.
- All the Vegetable cutter parts that come into contact directly or indirectly with the food product must be cleaned thoroughly.

**Before starting cleaning operations, it is necessary to:**
⇒ disconnect the machine plug from the mains to isolate it from the mains power supply.
Pay attention to hazards of injury caused by cutting and/or sharp machine components during cleaning or handling of discs.

7.2 - CLEANING PRODUCTS
The machine must be cleaned with a normal detergent at ambient temperature, with a wet cloth. It must never be cleaned with pressurised water, water jets, do not use brushes or other tools or anything that could damage the machine.

N.B. DO NEVER WASH THE MACHINE PARTS IN THE DISHWASHER.

7.3 - PROCEDURE
Disconnect the machine from the power supply.
Remove the lid and the discs, the spatula, the pestle, the bowl and/or the chute (Fig. n°23).
Clean accurately the inside of the mouth, the operating area and the disc support pin.
Moreover clean all the external surfaces and the pusher handle. Dry with a cloth and reassemble the machine.

Fig. n°23 - View of the machine disassembled for cleaning.

CHAP.8 - SCRAPPING

8.1 - PUTTING THE MACHINE OUT OF SERVICE
If for some reason, you decide to put the machine out of service, make sure nobody can use it:
⇒ disconnect it from the mains and eliminate electrical connections.

8.2 - SCRAPPING
When the machine is out of service, it can be disposed of. To scrap the machine contact your local Specialised Waste Treatment Centre, separate components (refer to chap.1 § 2.2).
Warranty

The Univex UFP 13 carries a One-Year, on-site, parts and labor warranty against any defects in materials or workmanship. The one-year period begins on the date of purchase by the end user and remains in full effect provided the unit is used properly in accordance with our instructions. Any Work to be performed under this warranty must be performed between the hours of 8:00 a.m. and 5:00 p.m. local time, Monday through Friday. Univex will not cover overtime charges of any kind. Please call the Univex Warranty Service Department at (800) 258-6358 to report any warranty claims before arranging repair or attempting to return the unit to Univex Corporation.

Damages incurred in transit or incurred because of installation error, accident, alteration or misuse are not covered. Transit damages should be reported to the carrier immediately.

Univex will not be liable for any consequential, compensatory, incidental or special damages.
